- NaI Detector
  - Needs PMT Base
  - Needs +800V Power Supply
  - Amplifier
- Ge Detector
  - Fix Preamp
  - Devise efficient way to fill LN2 dewer
  - Needs +3000 OR -4000 Power (depending on which detector)
  - preamp power
  - Amplifier
- PHA
  - Determine time constant of Ge detector pulses
  - Tune Bandpass filter independently for NaI and Ge
  - Test program robustness
  - Labview program to sum histogram files
- Coincidence
  - Find time delay of coincident pulses
  - Get/Build delay box
- HV Monitor
  - 1000:1 Voltage divider(s)
  - DVMM or Labview chart recorder

- Long Term
  - Radioactive sources
    - High energy (>2MeV ?)
    - Natural Abundance of ^{232}Th
    - Mystery Box?
  - Source stand for Ge
  - Test resolution of NaI & Ge
  - Test robustness of coincidence
  - **WRITE LAB MANUAL**
